## Lesson Plan

| Name of the Faculty | $:$ Dr. Virender Singh |
| :--- | :--- |
| Discipline | $:$ Biotechnology |
| Semester | $:$ 6th |
| Session | $:$ Feb 2021 to Jun 2021 |
| Subject | $:$ Plant Biotechnology (Theory code- BTE-304A; Practical code- BTE-314 LA) |

Lesson Plan Duration : 14 weeks
**Work Load(Lecture/Practical) per week (in hours): 03
Practical: 3

| Week | Theory |  | Practical |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Lecture Day | Topic(including assignment/test) | Practical Day | Topic |
| $1^{\text {st }}$ | $1{ }^{\text {st }}$ | Introduction to the subject | $1^{\text {st }}$ | Laboratory set Up |
|  | $2^{\text {nd }}$ | Concept of Cellular Totipotency |  |  |
|  | $3^{\text {rd }}$ | Types of culture: Seed culture, Embryo culture, Cell culture \& Protoplast culture |  |  |
| $2^{\text {nd }}$ | $4^{\text {th }}$ | Callus culture, Organ culture | $2^{\text {nd }}$ | Preparation of nutrient stock solutions and chelating agents |
|  | $5^{\text {th }}$ | Secondary metabolites |  |  |
|  | $6^{\text {th }}$ | Secondary metabolites production and applications |  |  |
| $3^{\text {rd }}$ | $7^{\text {th }}$ | Stages of micropropagation | $3^{\text {rd }}$ | continue |
|  | $8^{\text {th }}$ | Meristem and shoot tip culture |  |  |
|  | $9^{\text {th }}$ | Axillary bud proliferation |  |  |
| $4^{\text {th }}$ | $10^{\text {th }}$ | Organogenesis | $4^{\text {th }}$ | Handling and sterilization of media and plant material |
|  | $11^{\text {th }}$ | Embryogenesis |  |  |
|  | $12^{\text {th }}$ | Advantages and disadvantages of micropropagation |  |  |
| $5^{\text {th }}$ | $13^{\text {th }}$ | Anther/ Microspore culture | $5^{\text {th }}$ | Preparation of culture media from stock solution |
|  | $14^{\text {th }}$ | Gynogenic haploids, Significance and use of haploids |  |  |
|  | $15^{\text {th }}$ | Chromosome elimination techniques \& chromosome doubling |  |  |
| $6^{\text {th }}$ | $16^{\text {th }}$ | Methods of protoplast isolation, protoplast development | $6^{\text {th }}$ | Establishment of callus culture using different explants |
|  | $17^{\text {th }}$ | Somatic hybridization, identification and selection of hybrid cells |  |  |
|  | $18^{\text {th }}$ | Cybrids, potential of somatic hybridization \& its limitations |  |  |
| $7^{\text {th }}$ | $19^{\text {th }}$ | Nomenclature \& methods of Somaclonal variations | $7^{\text {th }}$ | Preparation of culture media for direct plant regeneration from axillary nodes and nodal tissues |
|  | $20^{\text {th }}$ | Causes of Somaclonal variations and Gametoclonal variations |  |  |
|  | $21^{\text {st }}$ | Applications \&disadvantages of somaclonal variations |  |  |
| $8^{\text {th }}$ | $22^{\text {nd }}$ | Method of cryopreservation and cryoprotectants | $8^{\text {th }}$ | Innoculation of axillary nodes and nodal tissues |
|  | $23^{\text {rd }}$ | Slow growth cultures and |  |  |

|  |  | Advantages \& disadvantages |  | for direct plant regeneration. |
| :---: | :---: | :---: | :---: | :---: |
|  | $24^{\text {th }}$ | Nitrogen fixation \& nodulation |  |  |
| $9^{\text {th }}$ | $25^{\text {th }}$ | Nitrogenase, hydrogenase | $9^{\text {th }}$ | Media preparation for seed culture and callus propagation. |
|  | $26^{\text {th }}$ | Growth promotion by free-living bacteria |  |  |
|  | $27^{\text {th }}$ | Transient and stable gene expression |  |  |
| $10^{\text {th }}$ | $28^{\text {th }}$ | Chimeric gene vectors, marker genes | $10^{\text {th }}$ | Seed culture on MS media |
|  | $29^{\text {th }}$ | Selectable markers |  |  |
|  | $30^{\text {th }}$ | Agrobacterium mediated method of gene transfer |  |  |
| $11^{\text {th }}$ | $31^{\text {st }}$ | Physical methods of gene transfer | $11^{\text {th }}$ | Inoculation and subculture for mass propagation of callus |
|  | $32^{\text {nd }}$ | Chemical methods of gene transfer |  |  |
|  | $33^{\text {rd }}$ | Resistance to biotic stresses: insect resistance |  |  |
| $12^{\text {th }}$ | $34^{\text {th }}$ | Virus and disease resistance | $12^{\text {th }}$ | Isolation of plant genomic DNA using CTAB method. |
|  | $35^{\text {th }}$ | Development of abiotic stress and senescence-tolerance: Oxidative stress, salt stress |  |  |
|  | $36^{\text {th }}$ | Herbicide resistance and Delay in fruit ripening |  |  |
| $13^{\text {th }}$ | $37^{\text {th }}$ | Transgenics for improved quality | $13^{\text {th }}$ | Organogenesis/somatic embryogenesis from callus culture |
|  | $38^{\text {th }}$ | Terminator seed technology |  |  |
|  | $39^{\text {th }}$ | Trangenic plants as bioreactors |  |  |
| $14^{\text {th }}$ | $40^{\text {th }}$ | Class Test | $14^{\text {th }}$ | Agrobacterium mediated method of gene transfer |
